8a) Should the Local Plan require (rather than just encourage) developers to incorporate renewable energy generation?

50081-4 Yes. It is critical that all new development is as carbon neutral as feasible if we are to start to address the climate emergency

8b) Should the Local Plan allocate specific areas in Fenland where commercial windfarms would, in principle, be suitable?.

50081-5 No, it would be better to have a criteria based policy, as much of the district is in theory suitable, but there are specific locations where it would not be good, for example close to the internationally important Ouse and Nene Washes or in areas functionally linked and critical to the birds using these sites, whether flight paths or feeding grounds.

8a) Should the Local Plan require (rather than just encourage) developers to incorporate renewable energy generation?

50059-5 In considering the requirement for the inclusion of renewable energy within developments the Council must test the impact of this policy viability and should be explicitly addressed within the whole plan viability assessment. It will also be necessary to ensure that the policy is flexible and allows for the variation of local requirement on the basis that its provision is either unfeasible or unviable, as required by paragraph 153 of the NPPF.

8b) Should the Local Plan allocate specific areas in Fenland where commercial windfarms would, in principle, be suitable?.

8a) Should the Local Plan require (rather than just encourage) developers to incorporate renewable energy generation?

50066-18 Yes.

8b) Should the Local Plan allocate specific areas in Fenland where commercial windfarms would, in principle, be suitable?.

50066-19 No - why should it just be restricted to wind farms? Fenland already has a large number of wind turbines already and I am not convinced they are necessarily the most efficient renewable way of generating electricity. I would prefer solar energy generation, and, to be more radical, investigate ways to harness water (tidal?) power on the Nene for instance.

8c) are there any opportunities to co-locate new development with existing or new renewable/low carbon energy supply systems?

8a) Should the Local Plan require (rather than just encourage) developers to incorporate renewable energy generation?

50124-17 Larkfleet prides itself on promoting and utilising renewable energy within its housing developments. However, in our experience we are having difficulty with getting connection where our schemes include renewable energy say from solar PV, because of network capacity. Therefore, on occasions Larkfleet Homes have had to refrain from incorporating renewable energy generation. Larkfleet recommend that this remains a encouraging policy rather than a requirement due to the capacity of the network.

8b) Should the Local Plan allocate specific areas in Fenland where commercial windfarms would, in principle, be suitable?.

50124-18 Larkfleet have no opinion for or against allocating land for commercial windfarms.

8c) are there any opportunities to co-locate new development with existing or new renewable/low carbon energy supply systems?

8a) Should the Local Plan require (rather than just encourage) developers to incorporate renewable energy generation?

50101-19 Yes. All new development must include a green energy use.

8b) Should the Local Plan allocate specific areas in Fenland where commercial windfarms would, in principle, be suitable?.

50101-20 I thought national policy was for no more on-land wind farm development. I also think Fenland now has enough of these. There are also enough bio-digesters and too much loss of food growing land for the growing of crops to rot and produce gas (a poor energy cycle, that is only justified where waste is rotted). Other green energy solutions need to be found, including solar on all new builds, both residential and commercial.

8c) are there any opportunities to co-locate new development with existing or new renewable/low carbon energy supply systems?

50101-21 Don't know.

8a) Should the Local Plan require (rather than just encourage) developers to incorporate renewable energy generation?

50125-13 Renewable energy generation on individual development proposals is not necessarily the most efficient way of delivering renewable energy generation infrastructure. A more holistic approach should be taken towards a development's energy needs and how they are met rather than focussing entirely on renewable energy technologies, especially as other approaches, such as increased levels of insulation, could deliver greater carbon savings.

8b) Should the Local Plan allocate specific areas in Fenland where commercial windfarms would, in principle, be suitable?.

8a) Should the Local Plan require (rather than just encourage) developers to incorporate renewable energy generation?

50044-7 It is suggested that a policy approach to Climate change, sustainable design and energy efficiency should take into account the historic environment.

We invite a specific policy relating to the inclusion of renewable technologies within Conservation Areas and with regard to historic buildings and the wider historic landscape. A sustainable approach should secure a balance between the benefits that such development delivers and the environmental costs it incurs. The policy should seek to limit and mitigate any such cost to the historic environment.

Listed buildings, buildings in conservation areas and scheduled monuments are exempted from the need to comply with energy efficiency requirements of the Building Regulations where compliance would unacceptably alter their character and appearance. Special considerations under Part L are also given to locally listed buildings, buildings of architectural and historic interest within registered parks and gardens and the curtilages of scheduled monuments, and buildings of traditional construction with permeable fabric that both absorbs and readily allows the evaporation of moisture.

In developing policy covering this area you may find the Historic England guidance Energy Efficiency and Historic Buildings - Application of Part L of the Building Regulations to historically and traditionally constructed buildings <<https://content.historicengland.org.uk/images-books/publications/energy-efficiency-historic-buildings-ptl/heag014-energy-efficiency-partL.pdf/>> to be helpful in understanding these special considerations.

8b) Should the Local Plan allocate specific areas in Fenland where commercial windfarms would, in principle, be suitable?

50035-9

8a) Should the Local Plan require (rather than just encourage) developers to incorporate renewable energy generation?

Yes, however it should not be prescriptive on the type renewable energy generation and whether or not this is a direct (onsite) or indirect (offsite) local connection. If the policy is prescriptive, existing and/or new technologies could provide valuable benefits could be inadvertently excluded or opportunities to connect into existing or proposed renewable infrastructure could be lost

8b) Should the Local Plan allocate specific areas in Fenland where commercial windfarms would, in principle, be suitable?.

50035-10

8c) are there any opportunities to co-locate new development with existing or new renewable/low carbon energy supply systems?

Yes, UK-based company MVV Environment Ltd recently announced plans for a new energy from waste combined heat and power facility generating electricity and steam on land at Algores Way, Wisbech.

The proposed energy from waste combined heat and power facility will divert over half a million tonnes of non-recyclable waste from landfill every year, generating over 50 megawatts of electricity and offering the opportunity to supply heat and power to existing and new local factories.

The total investment will be more than £300 million, and it is anticipated that construction will take around three years, during this time employing up to 700 people.

MVV will be looking to employ local people to help build, operate and maintain the facility.

The completed facility will have a 40-year life span and employ about 40 full time equivalent staff in a range of skilled roles. In addition, numerous indirect jobs will be created in the areas of maintenance, cleaning, catering and other goods/services.

The value of these will be in the region of at least £5 million per year, with further significant sums such as business rates paid to the local community. The location of the facility provides an excellent opportunity for the council to direct future developments with high energy demands to south Wisbech, on land currently allocated for growth and deliver on key sustainable development criteria set out in the National Planning Policy Framework.

8a) Should the Local Plan require (rather than just encourage) developers to incorporate renewable energy generation?

50073-19 This should be a matter for national building regs. It is not sensible for Fenland to give itself a disadvantage in comparison to other areas by requiring higher standards, likely to lead to higher costs, than other areas competing for businesses to come to the area. Not against the requirement nationally but it should be a level playing field

8b) Should the Local Plan allocate specific areas in Fenland where commercial windfarms would, in principle, be suitable?.

50073-20 There should be scope for wind and solar power in the area, and the infrastructure eg grid connection availability to permit them. Policies should permit these on a small scale in most areas and on a large scale in suitable locations

8c) are there any opportunities to co-locate new development with existing or new renewable/low carbon energy supply systems?

50073-21 Probably but no specific suggestions

50028-1

8a) Should the Local Plan require (rather than just encourage) developers to incorporate renewable energy generation?

Comment - On the whole it has been possible to accommodate renewable energy developments. However, it is often the export cable/main that creates problems, particularly in the absence of suitable "grid" infrastructure. Therefore, it is considered that the location of the nearest appropriate grid connection and the potential detrimental effect that connecting into it may cause must also be considered as part of the planning process.

8a) Should the Local Plan require (rather than just encourage) developers to incorporate renewable energy generation?

Comment - It is imperative that climate change is a core consideration of the new Fenland Local Plan and as such it should require developers to incorporate renewable energy generation.

8b) Should the Local Plan allocate specific areas in Fenland where commercial windfarms would, in principle, be suitable?.

8c) are there any opportunities to co-locate new development with existing or new renewable/low carbon energy supply systems?

8a) Should the Local Plan require (rather than just encourage) developers to incorporate renewable energy generation?

50023-4 Climate Change We welcome recognition of the importance of the climate change issue and the Council's proposal to provide a wide-ranging set of policies to demonstrate Fenland's leadership in tackling and adapting to it.

The Local Plan should consider climate change adaptation and recognise the role of the natural environment in delivering measures to reduce the effects of climate change, for example tree planting to moderate heat island effects. In addition factors which may lead to or exacerbate climate change (through more greenhouse gases) should be avoided (e.g. pollution, habitat fragmentation, loss of biodiversity) and the natural environment's resilience to change should be protected. Green Infrastructure and resilient ecological networks play an important role in aiding climate change adaptation. Plan policies should require development to enhance the ecological network to deliver climate change mitigation in addition to wider environmental services.

In particular, the climate change policy should reflect the importance of the district's peat soils as a significant carbon store, in helping to improve air quality and mitigate against climate change. The policy should seek to protect this and ensure relevant development contributes towards enhancement of degraded Fenland peat to deliver a wide range of environmental services including biodiversity, open space, flood risk and drainage benefits, in addition to helping to mitigate climate change.

Question 8: Renewable Energy Natural England is supportive of policies to promote renewable energy generation as a significant means of helping to combat climate change and reduce pressure on natural resources, subject to proposals coming forward in sustainable locations.

Fenland district is particularly sensitive to wind turbine development due to potential for impacts to birds associated with the Nene Washes Special Protection Area (SPA) and Ramsar site and the Ouse Washes SPA and Ramsar site. The district includes a significant area of land considered to be potentially 'functionally linked'¹ to these internationally designated sites, providing foraging habitat important for maintaining the sites' qualifying bird populations, particularly swans. Inappropriately located wind turbines pose a potential risk to these and other birds and wildlife through collision, disturbance and displacement. Natural England's Goose and Swan Functional Land IRZ is available to view through www.magic.gov.uk.

Planning applications for renewable energy development should be accompanied by sufficient information, including details of any necessary mitigation measures, to demonstrate no adverse ecological impact. Development likely to have a significant effect on a European site, including functional land, will need to be accompanied by adequate information to enable the LPA, as competent authority under the provisions of the Conservation of Habitats and Species Regulations 2017 (as amended), to undertake a Habitats Regulations Assessment.

The above matters should be addressed through appropriate policy requirements in the Local Plan.

8b) Should the Local Plan allocate specific areas in Fenland where commercial windfarms would, in principle, be suitable?.

8a) Should the Local Plan require (rather than just encourage) developers to incorporate renewable energy generation?

50026-19 The CCG believes that the Local plan should require developers to incorporate renewable energy generation due to the well known links between health and climate change, and the damaging effects on health from greenhouse gases from fossil fuels, not least from air pollution. Renewable energy can also be cheaper which helps reduce fuel poverty and it's associated health impacts (which include greater susceptibility to respiratory diseases, heart diseases, circulatory diseases, and mental health problems; as well as repeat visits to GPs and admissions to hospitals)

8b) Should the Local Plan allocate specific areas in Fenland where commercial windfarms would, in principle, be suitable?.

50026-20 The CCG has no view on this

8c) are there any opportunities to co-locate new development with existing or new renewable/low carbon energy supply systems?

50026-21 The CCG has no views on this
